A 10x10 grid of 100 rectangles. Each rectangle is defined by its width and height in terms of the grid units. The rectangles vary in size and orientation, representing different combinations of width and height that result in a specific area. For example, some are 1x1 squares, some are 1x2 rectangles, and some are 2x2 squares. The distribution of rectangles is such that they cover the entire 10x10 grid area.

The diagram illustrates a sequence of 10 rows of blocks. Each row contains a different number of blocks, ranging from 1 to 10. The blocks are arranged in a grid-like pattern, with the number of blocks per row increasing from 1 to 10. The blocks are colored in a repeating pattern of light blue, light green, and light yellow.
