The diagram illustrates the hierarchical structure of a 29-bit bus. The bus is divided into four main sections, each represented by a horizontal bar. The sections are labeled with bit ranges: 0-11, 12-23, 24-27, and 28-29. Each section is further divided into smaller units, with bit positions indicated by numbers in boxes. The diagram shows the relationship between the bus segments and the underlying hardware components, including the bus segments and the bit positions.
