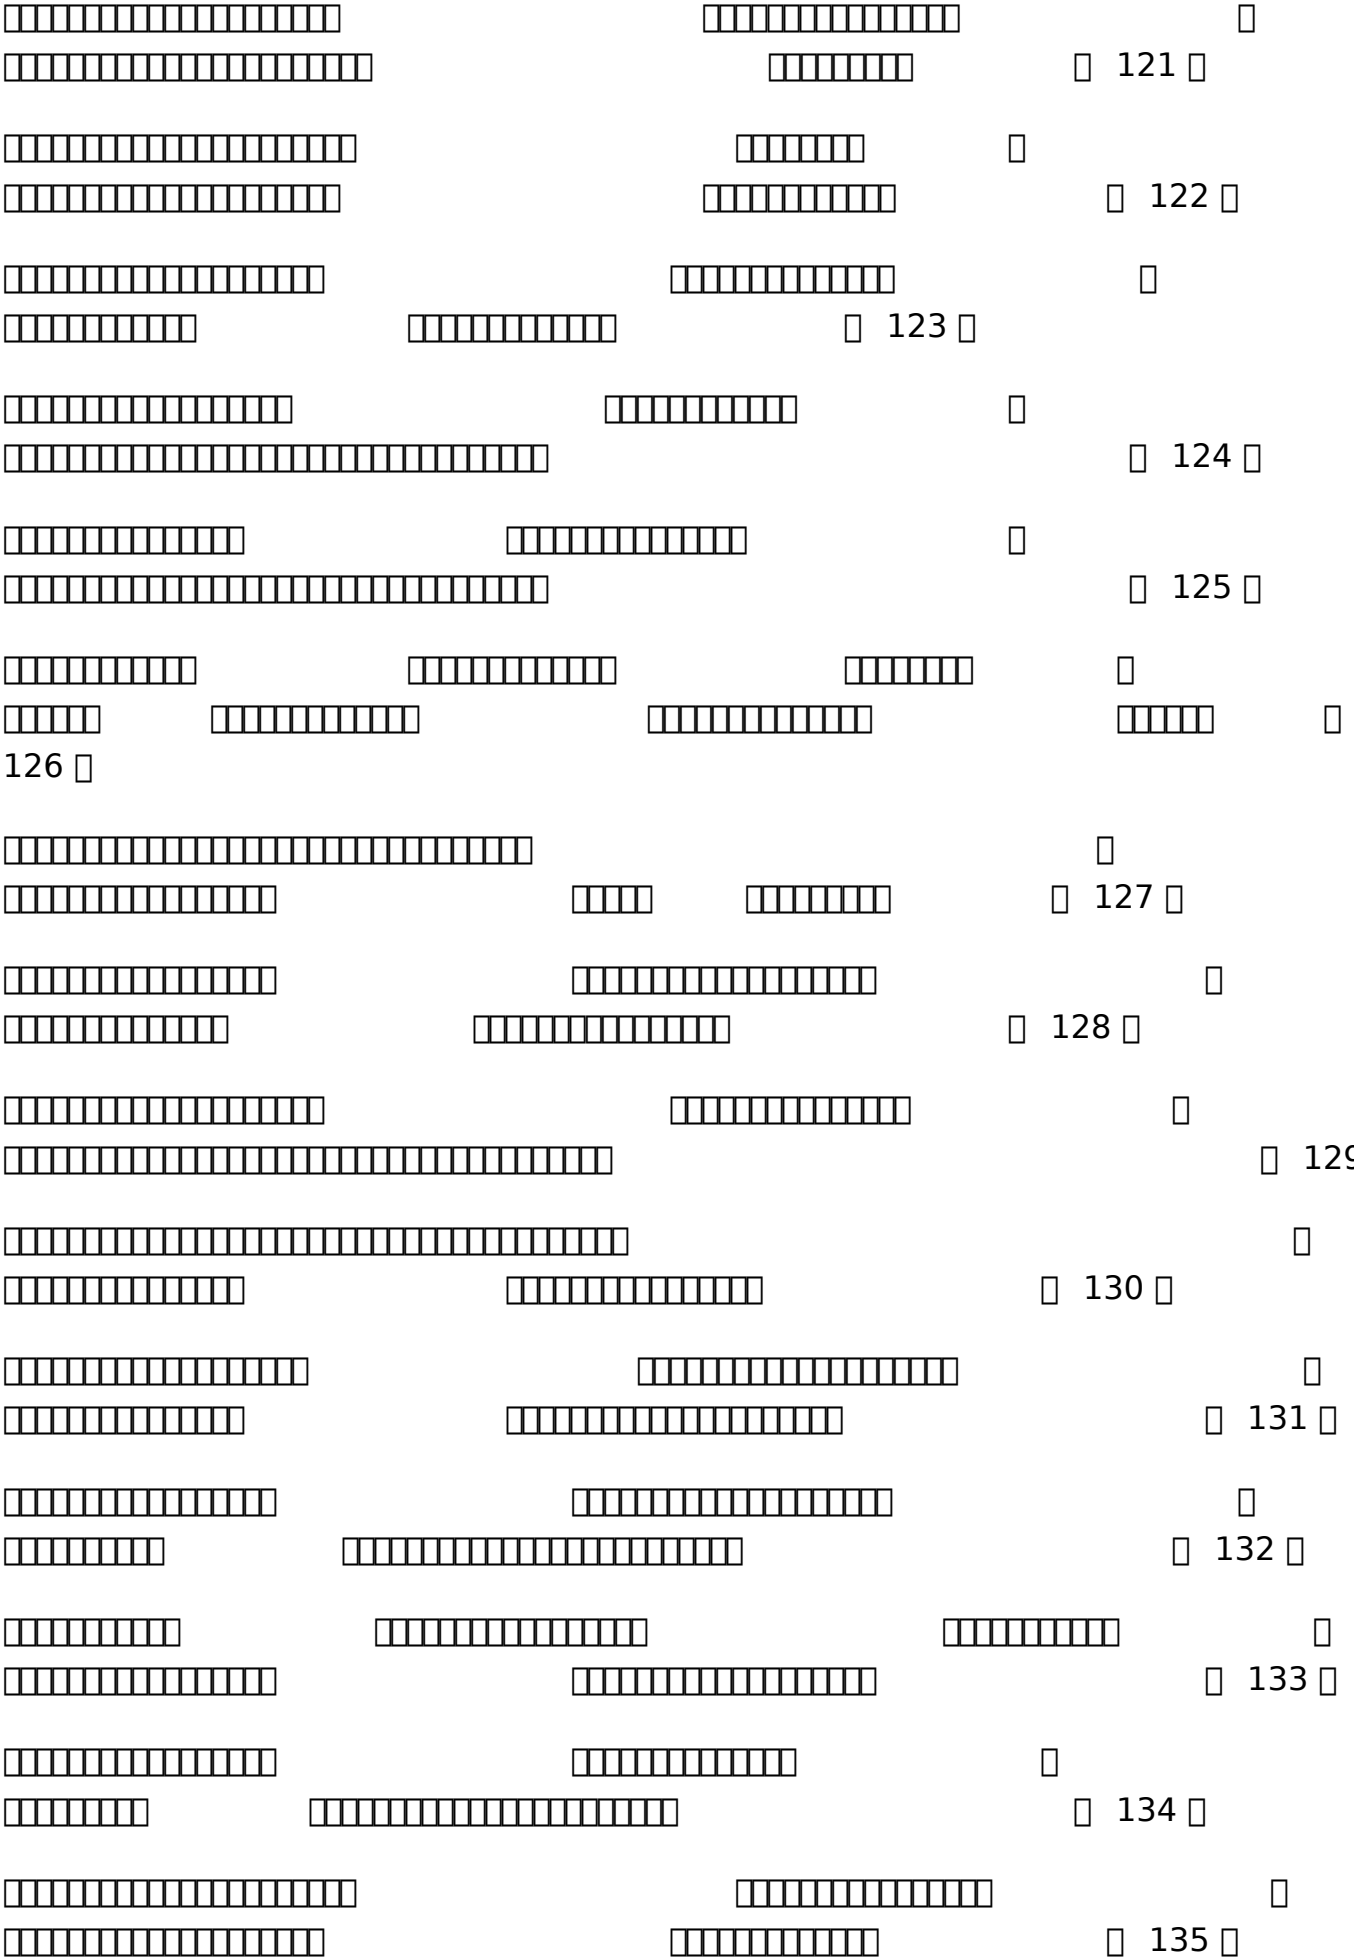

Diagram illustrating a sequence of operations or data flow, likely related to memory management or system booting. The diagram consists of multiple rows, each representing a state or step. Each row contains several rectangular blocks of varying lengths and positions, connected by lines or arrows, indicating the flow of data or the state of memory. The blocks are arranged in a way that suggests a progression of steps. On the right side of the diagram, numerical values are listed, corresponding to the steps shown. The values are: 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, and 149. The diagram shows how these values are derived from the arrangement of blocks in each row.
